

Day 1

# C++ by Abdul Bari

```
#include <iostream>
using namespace std;
int main()
{
    cout << "Hello World";

    return 0;
}
```

if you don't use using namespace std  
then

std::cout << "Hello World";

↖ scope resolution operator

\* getline (cin, variable)  
Print all the lines until you hit  
enter.

int a, b, c;

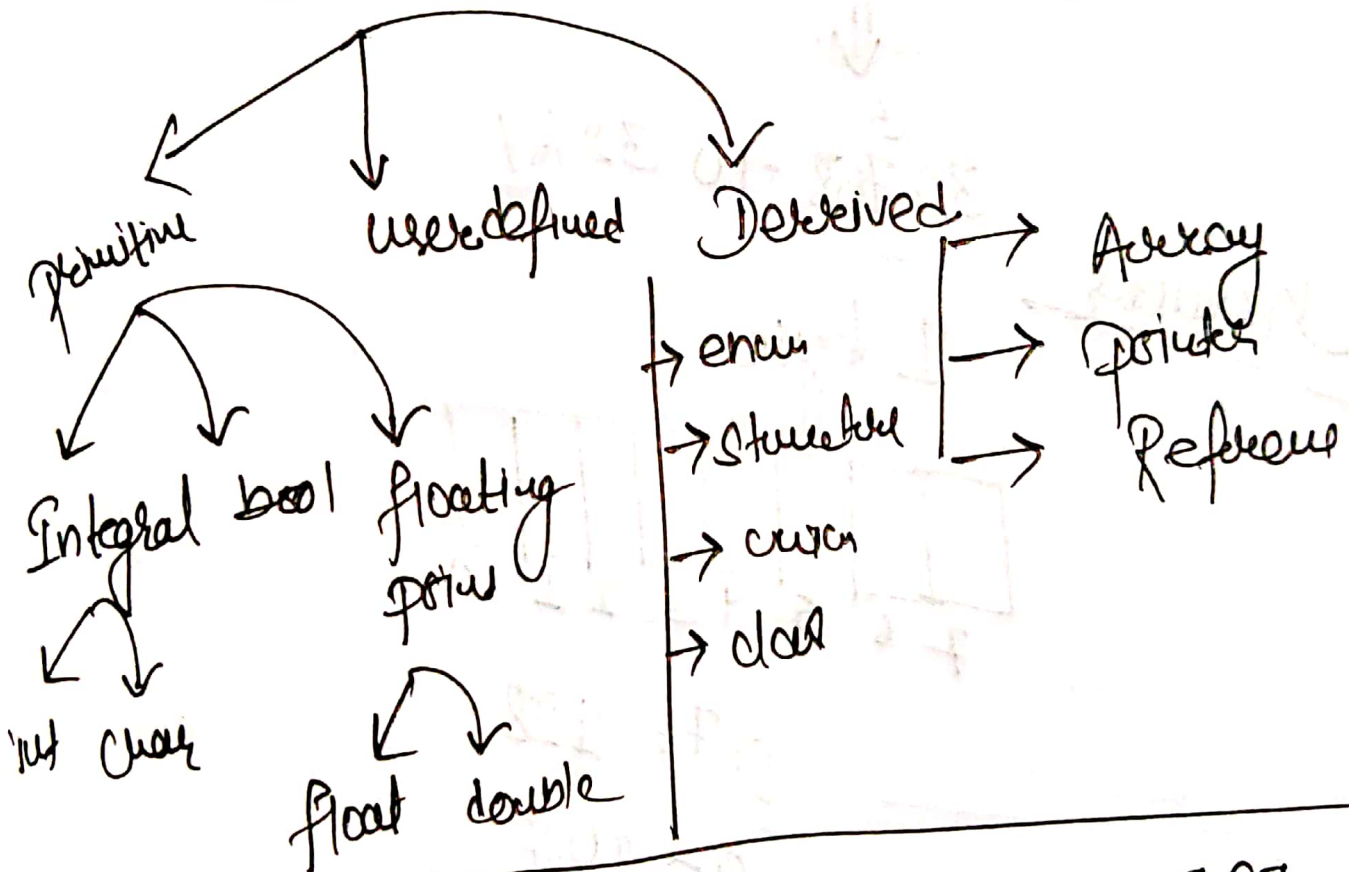

a = 10

b = 5

c = 15

## Datatypes

Integer

2 or 4

-32768 to 32767

float

4

$-3.4 \times 10^{38}$  to  $3.4 \times 10^{38}$

double

8

$-1.7 \times 10^{308}$  to  $1.7 \times 10^{308}$

bool

undefined

true / false

Integer Range

↓  
1 → -ve  
0 → +ve

$$2^{31} = 32768$$

$$32767 \text{ } 0^- \text{ } 0^+ - 32767$$

↓

$$\begin{matrix} 50 \\ 32768 \end{matrix} + 0 \text{ } 32767$$

Character = 1 byte

$$2^7 = 128$$

$$0 - 127$$

$$\begin{matrix} 50 \\ -128 \end{matrix} \text{ to } 127$$

ASCII Codes

A → 65  
B → 66

Z → 90

a → 97

b → 98

z → 122

0 → 48  
1 → 49  
⋮  
9 → 57

Modifiers

Unsigned  
long

Unsigned int = +ve  
value

65535

Unsigned char

= ~~255~~  
255

long int - 4 bytes / 8 bytes

long double - 10 bytes

Page Left for Miscellaneous Data types

# Operator & Expression

U A B R L C A

(1) Unary operator:  $+$ ,  $-$ ,  $++$ ,  $--$ ,  $\text{sizeof}$ ,  
 $R \rightarrow L$

(2) Arithmetic operator

$*$ ,  $/$ ,  $\%$   $L \rightarrow R$   
 $+$ ,  $-$

(3) Bitwise

$\sim$   
 $\ll$ ,  $\gg$   $L \rightarrow R$   
 $\&$   
 $\wedge$   
 $|$

(4) Relational

$<$ ,  $>$ ,  $<=$ ,  $>=$ ,  
 $==$ ,  $!=$

$L \rightarrow R$

⑤ Logical : !  
 §§  
 ||  
 $L \rightarrow R$

⑥ Conditional

test ? a : b  $R \rightarrow L$

⑦ Assignment :  $a = b$

⑧ post Increment / Decrement

⑨ Comma operator

$x = \{a + (b * c) - t / e\}$

$x = \frac{b + \sqrt{b^2 - 4ac}}{2a}$

## Increment / Decrement operator

```
int x = 5, y;
y = ++x;
y = (x = x + 1)
or y = (5 + 1)
y = 6
x = 6
```

++x = pre increment  
 x++ = post increment  
 --x = pre decrement  
 x-- = post decrement

y = x++;  
 y is assigned first then  $x = x + 1$   
 so  $y = 5$ ,  $x = 6$

$$J = (2 * (++i)) + (2 * (1 + i));$$

$$12 + (2 * 6)$$

$$= 12 + 12$$

$$= 24$$

~~for~~ cout << i << J << endl;

$$i = 7$$

$$J = 24$$

$$i = 5,$$

$$J = 2 * i++ + 2 * i++;$$

cout << i << J << endl;

$$J = 10 + 2 * 10$$

$$= 22$$

$$i = 7$$

3 }

**Overflow** (-ve number are stored in 2's complement format).

Char n = 127  
++n;

Range of char

-128 to 127

If you decrease beyond -128 or increase beyond 127 then it will go towards 127.  
Above then it will go towards 127.  
eg ++-128

Char  $x = 127$

$$++x; \\ = -127$$

Char  $x = -128$

$$++x; \\ = 127$$

$$(127)_{10} = (01111111)_2$$

+ 1

1 0 0 0 0 0 0 0

= 128

msb = 1  
so no. is -ve

(-128)

so  $++x = -128$

## Bitwise operators

These operations are performed on the bits of data, not on the whole data as a single unit

& and

| or

^ xor

~ not

<<

>>

XOR

0	0	0
1	0	1
0	1	1
1	1	0

$$\sim n = -(n+1)$$

Chose  $n = 5$

$n \rightarrow 0000101$

$$\sim n = \begin{array}{r} 11111010 \\ 00001001 \\ + 1 \end{array}$$

$$\begin{array}{r} 00000110 \\ = -6 \end{array}$$

$\ll$  (Left shift)

$$n \ll i$$

$$n * 2^i$$

Right Shift  $\gg$

$$n \gg i$$

$$= \frac{n}{2^i}$$

# Enum and Typedef

departments	menu file	Days
CS - 0	new - 0	mon. 0
mech - 1	open - 1	Tue - 1
ECE - 2	Save - 2	wed - 2
	Close.	

enum day { mon, <sup>1</sup> tue, <sup>2</sup> wed, <sup>3</sup> thu, <sup>4</sup> fri, <sup>5</sup> sat, <sup>6</sup> sun }

↑  
datatype.  
→ creates our own data type

```
int main()
```

```
{
```

```
    day d;
```

```
    d = mon;
```

```
    d = fri;
```

```
}
```

```
enum dept { CS = 1, ECE = 2,  
            mech = 3 }
```

## Typedef
